3 Nov · Iris
Revisit native xyz with a control
20-step four-arm screen
Jobs 2294671
Second candidate timed out; comparison incomplete
INCOMPLETE / invalid comparison

motivated

3 Nov · Iris
Test preparation memory policy
Inherited / interleaved child; copy + hash only
Jobs 2294674 failed → 2294675 qualified
File-page counter split changes; no solver result
MECHANISM / not a speedup

3 Nov

mechanism → solver test

5 Nov review (Vietnam) · Iris
Check whether the preparation-policy gain repeats
Same Scotch; only preparation-child policy changes
Jobs 2294676 /2294735 /2294800
Independent ABBA 40: 29.0048 versus 27.3379 s/step; +6.10% slower
CLOSED / no stable gain

5 Nov

motivated

5 Nov · Iris
Test solver-rank interleave policy
Qualify outer and in-rank numactl behavior, then compare default versus in-rank policy in a 40-step ABBA solver trial.
Jobs 2294801 / 2294802 / 2294803
Control A1 completed at 24.7586 s/step; candidate B1 timed out after 33 timings (partial mean 41.8465 s/step; not a score). Remaining arms did not start.
INCOMPLETE / invalid comparison

motivated

5 Nov review (Vietnam) · Iris
Qualify tiny Allreduce before a solver trial
Default MPI versus forced tuned recursive doubling; 8/64-byte correctness-checked ABBA probes
Jobs 2294805
8B block 1: default p50 2.478 us; forced tuned 4.117 us; candidate fails benefit gate
CLOSED / no stable gain

distinct next question (not causal)

5 Nov review (Vietnam) · Iris
Test 48-rank Scotch at a matched horizon
Use a native 48-domain Scotch partition (job 2294914) and required initialization (2294915), then compare 48 versus 56 ranks in four 40-step ABBA arms (2294916). Rank count and required partition change together.
Jobs 2294914 partition / 2294915 initialization / 2294916 solver / 2294918 reverse confirmation accepted
48-rank pooled mean 26.703647651 versus 32.322052535 s/step at 56 ranks; 17.382574569% lower within this allocation. Both adjacent pairs favor 48 ranks.
QUALIFIED SIGNAL / repeat needed
